# Moving the Prophetic Clock from End Times to Endless Times

China unlocks 60,000 years of energy. Major prophetic implications for South Africa and the Kingdom of God agenda. Here is a different perspective on a wonderful future.

I know the news in our evangelical prophetic community is all analysis of Trump, Putin, the New Pope, Israel, Mid East War, financial trials, tariffs. I want to instead encourage you with some great news on the technical front that has major implications for the vision of possessing Southern Africa for our Promised Land.

However I cant resist the temptation on once again warning you about excited prophets who rather than being inspired by the Spirit of God are inspired by the spirit of the age and spectacular headlines.

Frankly I am waiting for the prophecies about the new Pope. I remember years ago when Francis was elected when Benedict resigned according to the St Malachi prophecies he was the last one of 112 (or 111?). That meant "end times" Armageddon was here. I remember one of the many prominent prophetic voices Sadhu Sundar Salvaraj at a major conference in 2015 "The Lord appeared to me...." and this pope Francis is the False Prophet of Revelation 13....etc as the last pope, end times etc. Or Chris Reed 2 years ago at Rick Joyner's Morningstar..." I had vision....Joe Biden will not finish his term and Putin will die shortly....."

And time goes on and on and on.....and as Peter had to answer in his epistle "so where is the promise of his coming, for since the fathers fell asleep all things continue the same.... 2 Peter 3:4) People were complaining. Nothing has happened. 2000 years later people are asking the same thing. Our Pentecostal movement has been in high excitement since 1948 and founding of Israel. 77 years now of "this generation shall see the end".

Ok you know me by now I am not into end times theology. I get excited by Kingdom Now and Kingdom Growing till it fills the earth. So let's get on to the real "signs of the times" this last week.

## China's Breakthrough: Thorium Discovery Promises 60,000 Years of Clean Energy

In the report, scientists claim that **the Bayan Obo mining complex in Inner Mongolia, which is the world's largest rare earth producer and has a huge amount of thorium in tailings**, enough to fuel China for 60,000 years.

On top of this announcement also China announced the successful opening of their new thorium powered molten salt nuclear reactor powered by thorium not uranium. To be

honest thorium nuclear reactors are not new. Canada pioneered their nuclear program in the 1960's/70's with their CANDU reactors (Canadian Nuclear Deuterium Reactor) that can use thorium as fuel. They did not go the uranium PWR reactor route because they did not need plutonium to make nuclear bombs. America and Russia did. So nobody bothered with thorium. Thorium has 200 times the energy potential than uranium (U235 content).

Here is the good news. Go Google a list of the top 10 countries with thorium deposits and South Africa is 9th in the world. We could power Southern Africa at current power needs for 100,000 years with clean energy (and no plutonium pollution) with our thorium deposits. And we don't have to use the Chinese high tech molten salt reactors we could do it with 60 year old Canadian CANDU tech.

Do a bit of thought experiment with me. Since we know from Hebrews 1 that all things were made by Jesus and he upholds all things by the word of His power (Heb. 1:2-3) A good question to ask the Lord who made all things...'Jesus why did you make thorium?' Until quite recently in human history we did not know the answer to that. So the second good question would be to ask Jesus, 'Lord why did you provide a 100,000 years supply of clean energy for us here in South Africa.?'"

Why would you ask the Lord this? Well if you go back to Genesis 2 you would see that after God made Adam he told him to name things in Eden To name something is to investigate it...research and see what is its purpose. He also gave to man an earth that has all the resources for all that is needed be productive, prosperous to multiply to fill the earth.

Adam did not name thorium Because he did not need it at that stage of human development to multiply and fill the earth.

Today we got to 8 billion people because energy and technology have grown to support that growth. We know this as a certainty of economics. Energy consumption per person has a direct correlation to prosperity and growth and the ability of a population to grow.

But now we need to ask a theological/sociological question? Since Jesus made all things...is a vast population that needs huge amounts of energy supply to grow and prosper His intended purposes for His creation? The answer is absolutely yes.

Isaiah 9:7 says of the coming Messiah....

"Of the increase of his government there shall be no end" It does not say here "his government shall not end" we know His throne is forever. But it does say "the increase" of his kingdom there will be no end. Jesus has made his creation in such a way that its growth is done through families having children. That is done here on earth not in heaven.

His promises to Abraham was that his seed would be as vast as the sands of the sea and the stars of the heavens (all of which the Lord made and knows exactly how many trillions there are).

### **The tragedy of Southern Africa.....**

Our great tragedy as a nation and a people is that Jesus wants to know what did we do with all He gave us and what did we not do with all He gave us. We are the most blessed

portion of planet earth the nations of Southern Africa. Not a place on earth this size has the size, the diversity of riches, of minerals, of plants and animals of natural resources of scenic beauty.

Why are not the most prosperous blessed people on planet earth? Why can Korea or Japan who don't have any of the minerals we have to make something as basic as steel or stainless steel, why can they buy our raw unprocessed ores transported thousands of kilometers and convert those into steel and steel products. Why cant we actually make steel profitably when it is all in our backyard?

Why when we have all the land and plant material and biomass and labour why are our children malnourished and the people hungry. Why when we can produce an abundance of cement and bricks and millions unemployed, why are our people living either homeless or in shacks?

### **The Church and Southern Africa**

Like the peasants of Egypt who were worshipping false gods our people worship false gods. We don't know what those gods and idols meant. If you had a need there was a god and idol and temple you go to supplicate for that need. You need a good crop, there was a god of the harvest. You want children you supplicate the fertility goddess. You want a loan, you go to the temple treasury.

Today we have turned government and high finance into the gods who will supply. They have failed the people and their needs and they have failed to account for what they have done or not done with the bounty that the Lord has given to our territories.

God's vision of a Promised Land to the oppressed peasants of Egypt was a promise of a place of safety, a place of your own, a place where you can grow your family, a place where you can work and produce and trade and prosper. And His Torah given to Moses was the roadmap to that Land of Prosperity.

We the church need to broaden our vision of how we organize church for creating a Promised Land for our people. Let me give you a thought speculation on what the end times looks like but what a long term growing church could look like....

### **A Different idea on the Millennium...**

People like to talk about the Millennium. Are you a Pre-Mil or Post Mil or A Mil in your eschatology. Me I ask myself a different question. I see Revelation talks about a city and 144,000 and a thousand years. What would happen if I could inspire 144,000 fellow Jesus disciples, lets build a City, meaning a community....what could we do with a 1000 years here in Southern Africa and seeing we have 100,000 years of energy supplies what could we do? Well if we could keep ourselves together as a Christian community (should not be difficult the Catholics have been doing that for more than a 1000 years) and suppose we concentrate on 1% growth a year (that requires 2.7-3 children per family) and if we ensure that we invest into the community with our resources and pass that on to the next generation....then where would we be in 1000 years?

Well our little community would be 3 billion strong. And if another fellowship like ours did it in North America, and another in South America and another in Asia and another in Europe? We would own and control the world.

We charismatic evangelicals are the biggest and only growing part of the world church community.

Maybe if instead of thinking and praying for Millennium one day when Jesus comes why not start now and plan what the next 1000 years will look like. The best way to prophecy the future is to create the future God wants.

I can already tell you the wicked are dying out. Every advanced nation on earth is producing only 1.3-1.5 children per woman. Meaning they are all dying. We are going to have to care for their dying old people one day because they have no children to care for them.

So yes let's plan. Our Protestant revolution is already 500 years old...how about another 500 years...but this time on our terms and our laws of God's Kingdom and His economy.

I want to carry on this conversation with you.

The issues I want to raise are this. Our previous 500 years we were good at transmitting and developing the gospel of Jesus Christ. We have come a long way in teaching and worship. We know how to carry the message and salvation from one generation to the next. We built and refined institutions for church growth. We know how to do that.

We now need to begin designing new institutions of what the Ekklesia and the Body of Christ looks like that can be a repository of the wealth and knowledge and culture of God's people from generation to generation and how to protect our families from the coming collapse. That is the "as in the days of Noah" strategy. Build institutional arks to shelter our families and assets through the coming storms with enough assets to rebuild a new world.

How do we grow families and economies for the next 500 years while at the same time caring for God's earth in a way that the next generation inherits a better earth than the one who left it.

Meaning instead of preparing for the Rapture when the world order collapses how about preparing for the inevitable collapse of the world order and how we clean up their mess and rebuild God's Promised Land?
